

## The Secret is Out...

**Do you have workers compensation claims impacted by pre-existing conditions or co-morbidities?**

Compensability for workers compensation claims may be questioned for many reasons:

- Co-morbidities or pre-existing conditions
- Injuries occurring prior to employment
- Concerns about causation
- Prior claims
- Job type or tasks

***The problem is finding an objective way to evaluate these claims.***

ESIS' Age of Injury assessment incorporates a radiologist's review of MRIs to determine the age of an injury and identify factors that may have contributed to the injury cause or severity. Our data shows:

- 44% are chronic, developing over time
- 42% had multiple contributing factors, signifying preexisting injury and another newer injury showing in the same area
- Only 14% were found to be acute, sub-acute, normal, or indeterminate

Using our low-cost Age of Injury tool, our claims professionals can:

- Better assess the injury, causation, and compensability
- Support apportionment where applicable
- More effectively and fairly resolve claims
